GUI to Backend Requests — inquiries-app

Generated 26 October 2026 from branch master (commit 68b22db).

The GUI calls two kinds of backend: AWS API Gateway / Lambda (eu-west-2) and Make.com webhooks (hook.eu2.make.com). Some calls go through Next.js API routes in src/app/api/* first, and others go straight from the browser to Make.com.

A. Through Next.js API routes (browser → /api/… → backend)

#	GUI caller	App route	Backend	What it does
1	page.tsx:152 via fetchMonthlyEmployeesData (utils.ts:36)	GET /api/monthly-employees?email=&periodId=	AWS 7k7a7oe9rl…/getMonthlyEmployeesDataByEmployeeId	Loads the employer's employees, columns, periods, leaving reasons and 101 link, looked up by email
2	MonthlyReport.tsx:575 via updateMonthlyEmployeeData (utils.ts:235)	POST /api/monthly-employees/update	AWS h8vdwzo12d…/updateMonthlyItems	Saves edits to the monthly report
3	AdminDropdown.tsx:23 via fetchAdminClients (utils.ts:258)	GET /api/admin-clients	AWS t076re7x4e…/getClientsEmails	Admin only: list of employers (name, recordId, email, periods)
4	page.tsx:223	GET /api/inquiries/data?recordId=	AWS kt08aagomj…/getInquires	Loads inquiries (monthly, general, yearly) for an employer
5	page.tsx:397, page.tsx:431, Vacations.tsx:56	GET /api/missing-docs?employerRecordId=	AWS w1zwtqc1jf…/getMissingDocsByEmployer	Missing documents: used for the sidebar badge counts and the Vacations table
6	ColumnSettings.tsx:83	POST /api/update-columns {clientRecordId, columns}	AWS p4r75rrbca…/UpdateColumnsForEmployer	Turns report columns on or off
7	InquiryDetail.tsx:215, SupplierTable.tsx:271	POST /api/suppliers {sets, recordId}	Make p1blghe3lplkmnn6215xpmkbiyry3d5w?recordId=	Submits supplier / monthly inquiry answers and files
8	YearlyForm.tsx:164	POST /api/yearly {sets, recordId}	Make 1area7zkgtos7f1m3n5twrd3qq50tqe5?recordId=	Submits yearly inquiry answers and files
9	MonthlyReport.tsx:1113	POST /api/create-reporting-period {recordId}	Make tpofetnytl2hy2qbamc36dsajoqgmi5r	Closes the current reporting period and opens the next one

B. Straight from the browser to Make.com webhooks

#	GUI caller	Method	Webhook (hook.eu2.make.com/…)	What it does
10	page.tsx:313 via updateColumnSetting (utils.ts:61)	POST ?recordId=	duxu4qucp2j1oe8522b7ylfl9f6fnq39	Sends the employees and columns after a column-setting change

#	GUI caller	Method	Webhook (hook.eu2.make.com/...)	What it does
11	AddEmployee.tsx:256 via addEmployee (utils.ts:92)	POST	qv5d2vgs8b992av1tpd9a880abbh7yyu	Adds a new employee (name, ID number, start date, pension, etc.)
12	EmployeeRecognition.tsx:107	POST	6yvgowfqvfq0maax195lb7s0x2ayb53m	Removes an employee (termination), with an optional base64 161 form
13	DocumentUpload.tsx:171	POST	m2ow857a46axrtmhq26yzw84d8ibm8gv	Uploads general documents (uploadType: "document")
14	MonthlyReport.tsx:347	POST	same m2ow857a...	Uploads a document for a single column (e.g. reserve duty / מילואים)
15	Vacations.tsx:196	POST	same m2ow857a...	Uploads missing documents, one row at a time
16	PaySlip.tsx:201	GET ?recordId=	0dt1lukm4kv7zpiyylmefc9l8e1dtypq	Lists the employer's payslip PDFs, by date and document type
17	inquiries/page.tsx:131	POST {sets}	p1blghe3lplkmnn6215xpmkbiyry3d5w	Older /inquiries page: supplier answers. Same webhook as #7, but sent without recordId
18	inquiries/page.tsx:184	POST {sets}	1area7zkgtos7f1m3n5twrd3qq50tqe5	Older /inquiries page: yearly answers. Same webhook as #8, but sent without recordId

C. Other

- **Clerk:** sign-in, sign-up, useUser() and the middleware session check all go to Clerk's own API through its SDK.
- **Defined but not called anywhere:** fetchEmployeeData (utils.ts:16) and GetPDF (utils.ts:194, Make 1qr8sx2y62843ve29y5agc0c26tl8r1s). There is also a commented-out older Make URL in inquiries/data/route.ts:39.

Things worth knowing

- **Nine webhook calls (#10–18) go straight from the browser,** so those Make.com URLs are visible to anyone using the app, and nothing checks the user's identity on the server first.
- **The /api/* routes don't check who is asking either.** The middleware protects them, but no route compares the email or recordId sent in the request against the signed-in Clerk user. A signed-in user could ask for another employer's data by changing the email or recordId.
- **Admin status is decided only in the browser,** by checking the email domain in page.tsx. Nothing on the server enforces it.
